PREFACE

25X1A

This is a [] report. Personnel receiving this report are cautioned that a strict need-to-know principle applies. and 4) within a WAC area by coordinates reading from south to north and from west to east.

This Mission Coverage Index (MCI) lists targets of intelligence interest in Cambodia and South Vietnam covered by aerial photographic material from Mission 6070, dated 29 December 1963. Items in the compilation are arranged in two sections:

Section I provides summary information for a) newly identified targets, b) previously reported targets which show a change, and c) all targets showing order of battle information.

Section II provides a listing of those targets which could be identified but not interpreted.

Both sections are arranged 1) by country, 2) within a country by subject, 3) within a subject by WAC area,

For the convenience of the user, an index to all targets has been included following Section II. Targets in the index are listed 1) by country and 2) alphabetically by place name within each country. An explanation of column headings and photo reference data used in presenting the information is contained in the appendix.

The user of this MCI is cautioned that the scan of photography was accomplished in a relatively short time and often without the aid of precise analytical and mensural techniques commonly employed in detailed photographic analysis. Consequently, although the information presented herein is essentially accurate, additional, detailed analysis may somewhat alter portions of the information.

APPENDIX

COLUMN HEADINGS

City, Installation -- This column contains the name of the city or town nearest the installation, followed by the name of the installation. If the name of the installation is not known, it is titled according to its function. The city and installation names are followed by a capsule description, where appropriate.

Coordinates -- Coordinates are referenced to the SW corner of the minute square. When the subject installation covers a wide area, coordinates are given for the approximate center of the installation.

WAC -- This column provides the World Aeronautical Chart number for the area in which the subject installation lies.

Installation Numbers -- This column is divided into two subcolumns. The first subcolumn lists, when known, the BE installation number assigned to the target. The second subcolumn lists the installation number assigned by NPIC. Installation numbers, when used to reference an item, should be prefixed by the appropriate WAC number,

since installation numbers are repeated from WAC to WAC. For example, there is an NPIC target number 0738-1 and an NPIC target number 0739-1. In each instance, the NPIC installation number is 1, but the installations appear on different WACs.

COMOR TARGET NUMBERS

Target numbers assigned by the Committee on Overhead Reconnaissance (COMOR), when available, are listed directly above the photo reference data.

PHOTO REFERENCE DATA

The photo reference data indicates the frame(s) on which the installation appears.

CONDITIONS AFFECTING PHOTOGRAPHY

Following the photo reference data, symbols indicate conditions which affect the appearance of the installation on the photography. The symbols are: C (clear); SC (scattered clouds); HC (heavy clouds); H (haze); CS (cloud shadow); SD (semidarkness); O (obliquity); and PQ (poor image quality).
